Oath/Declaration

1. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because it is not in English or the oath is not provided.

Claim Objections

2. Claims 7-9 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend on another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 7-9 have not been further treated on the merits.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mattar et al. (5,926,096) (hereinafter Mattar).

Mattar teaches a Coriolis flow meter comprising all the features of the instant invention for measuring the flow rate and also using the same for determining the wear in the conduit. Mattar teaches the use of a circuit that measures the values at two sensors and determines the wear in the pipe based on computations. Mattar does not explicitly teach a use of a single oscillatory pulse to the pipe and measuring the response and compared to a stored data. It would have been obvious to a person having ordinary skill in the art at the time the invention was made to use any method

that provides the desired results since the main concern here is to determine the wear in the pipe, and thus considering the measured values from both the sensors or applying a single pulse would be within the scope of a skilled individual. Mattar also teach a damping ratio evaluation (Fig. 9), which is similar to the outcome of the instant inventive concept, where a single pulse is applied and the resulting chart is observed.
